

800 Service Keeps Calling? Here's What It Means (and How to Stop It)

You're probably here because your phone keeps blowing up with calls labeled "**800 Service**" or "**Unavailable Number**" — and when you answer, no one's there. Or worse, it's a telemarketer or some vague robot voice trying to sell you something.

Yeah, I've dealt with this too. And based on how much traffic my original article on this topic got, I know I'm not the only one. Here's what's really going on — and how to fight back.

What Are "800 Service" Phone Calls?

Most of the time, "800 Service" calls come from telemarketers or robocall systems. These calls use toll-free numbers (like 800, 888, 877, etc.) and are usually generated by automated dialing systems that call multiple numbers at once. The system connects whoever picks up first, and if you're not that person — you'll get dead air.

Even worse, many of these calls are *scams* pretending to be from companies like your cable provider, credit card company, or a random contest you "won." Don't fall for it.

What Does "Toll Free" Mean?

A toll-free number is a phone number you can call without being charged for the call. Instead, the business or organization that owns the number pays for the cost. Toll-free numbers typically start with prefixes like 800, 888, 877, 866, 855, 844, or 833.

The term "toll-free" simply means no toll (or cost) to the caller. These numbers are often used by customer service lines, sales departments, and support centers because they make it easy and free for people to get in touch—especially useful when calling from landlines.

This used to matter more when there were more land-lines and each call cost some money, but that's not really the case now with mobile phone plans covering so much.

In short: if a number is toll-free, you won't get charged for dialing it.

How to Stop 800 Service Calls

Here are a few ways you can cut down — or eliminate — these annoying calls:

1. **Let it ring a few times before answering.** That way, if it's a robocall blasting multiple numbers at once, it might already be connected to someone else.
2. **If someone answers, ask to be removed.** Politely request they take you off their call list. Legitimate companies are required to honor this. Scammers... not so much.
3. **Block the number on your phone.** On iPhones, tap the "i" next to the number in your call history, scroll down, and hit "Block this Caller."
4. **If your phone can't block calls:** Create a "Spam" contact and keep adding numbers to it. Assign it a silent ringtone and no vibration.
5. **Register with the National Do Not Call Registry:** Visit [donotcall.gov](https://www.donotcall.gov) or call 1-888-382-1222. It won't stop scammers, but it helps with legit marketers.
6. **Use a call-blocking device:** Products like the [TeleZapper™](#) or a call blocker phone can reject robocalls automatically.
7. **Check with your phone provider:** Many offer spam call filtering or advanced call blocking services.
8. **Use a spam-blocking app:** Apps like **Hiya**, **Truecaller**, and **Nomorobo** help identify and filter known spam numbers.
9. **Just don't answer 800 numbers.** If it's important, they'll leave a message.

Tips from the Community

When I first published this article, I got a ton of comments from readers sharing what worked for them. Here are some of the more creative responses:

- Using **Nomorobo** to auto-block robocalls after just one ring.
- Recording and playing back a fax machine tone when answering.
- Blowing a whistle into the phone (not recommended, but people are clearly fed up).
- Letting the phone announce the caller ID aloud, so you don't even have to look.

Some of these methods are more extreme than others, but hey — desperate times.

Can the Government Actually Do Anything?

The Do Not Call Registry is helpful for stopping *legitimate* telemarketing, but it doesn't stop scammers. Caller ID spoofing — where the number you see isn't even real — makes

enforcement tough. Still, you can report persistent offenders to the [FTC](#) or FCC, especially if you're on the Do Not Call list.

Find Out Who is Calling

Here are 2 websites that will help you do a phone number search and find out who is calling you:

- [PhoneNumbers.org](#)
- [TrueCaller](#) (App)

Bottom Line

“800 Service” calls are usually just noise — telemarketers, scammers, or robocalls. Your best defense is a mix of call blocking, smart apps, and patience. And honestly, ignoring the call is sometimes the easiest solution.
