

How to Block Inappropriate Websites on Phones and All Devices in Just 5 Minutes

How to Block Inappropriate Websites on a Phone

Instead of getting content filters on every device you own, why not just take care of all devices (including iPhones, Android, and Google phones) at once **in just 5 minutes?**

Wouldn't that make more sense?

That's exactly what I'm going to tell you about here.

How To Block Inappropriate Websites On a Computer

Hi, I'm Tony...

I did the research and testing and years ago, I found a way to block inappropriate websites that still works great today. Better yet, it's free to use and takes less than 5 minutes to set up.

For just \$10.99 for my 3-step guide (and bonuses), I'm **100% confident** you'll be able to block naughty websites immediately after reading it.

This works on **all devices and browsers on your network** – **even if new devices join the network**, they'll automatically have filtering on them. That's the ideal solution, right?

Sure you can go out and get BlockSite for Chrome on Windows, and on Android. Oh, then you need another app or filter for iPhones and Macs...ugh – where does it end?

I have a solution that eliminates all these headaches, it takes less than 5 minutes, and using it is free.

Seriously.

But first, we have to point out and ask...

Why Block Adult/Porn Websites, Phishing Sites, and Inappropriate Websites?

Let's get this out there first...

You do not have to be embarrassed about setting this up. It happens to all of us. Sometimes these websites just pop up. Often, they somehow are able to open a pop-up window in the background even though every modern browser out there has tried their best to stop that very thing from happening.

And when there is a pop-up window in the back, you might miss it... for days or even weeks if you keep your computer running all the time. **Who knows who might see it** or even what that window is doing?

Sometimes, these pop-up windows open in the very corner of your screen where there's just a pixel or two showing – that's how tricky they are sometimes. **It's pretty scary.**

Recently, it's been found that these websites running in these windows are **mining bitcoin on YOUR computer**. They're stealing your power, which runs up your phone bill for someone else to mine cryptocurrency and get rich on your behalf. It's terrible.

Wanting to protect your computer, your family, your kids, and yourself from whatever these websites are trying to do is very reasonable.

In fact, **if you're not concerned** about what may be running on your computer, **that's a problem.**

There are bugs/holes in software and just by running your web browser, **hackers can actually try to gain access to sensitive information.**

Since it's really hard to know exactly what's going on... it's best to put protection in place to block these websites from even having access to your computer **in the first place.**

And Phishing Websites, Too!

Phishing websites – you know, the ones that look like real places to login but are actually fake... if you accidentally login there without knowing it, **you could be giving your banking information away to hackers!**

Wow, that's a lot of problems... and **it doesn't seem to end.**

Luckily...

Here's the Solution That Helps You Protect Your Computer and Your Family

You probably have more devices on your network than you think. Either walk around your house once and look for devices using the network or go into your home router's settings and see where it lists everything.

Did you find all of these devices?

- - Phones
 - Tablets
 - Computers
 - Web browsers of all types: Chrome, Safari, Firefox, Edge, etc.
 - Laptops
 - Gaming consoles
 - Smart devices
 - Smart speakers
 - Watches
 - Printers
 - Appliances
 - Outlets
 - Heating/air conditioning
 - Home security
 - TVs
 - DVRs
 - DVDs

I would bet there's probably 5 or more devices you didn't even count up or think about. That's today's world.

Oh, and with this solution, you can even **add this to devices that leave your network** like phones, tablets, and laptops. That way, you're better protected on any network. Again, there's no extra charge to do that – do it to as many devices as you want.

IDEALLY, You Want Something That...

- Protects any new device that joins the home or office network
- Takes less than 5 minutes to install
- You set it up once and it's done / no updates needed
- No "per device" license of any kind
- Costs you nothing – is completely free
- May even give you faster connections to sites like Facebook

Wouldn't that be nice?

Well, it's here and available.

This 3-Step, Easy to Follow Book Explains It All

I walk you through the **free solution** (you are getting a FREE solution), which can be applied to your network and **as many devices as you want**. I did the research, testing, and came up with the steps, so **I think a few dollars is worth all the legwork I've done...**

Help Protect Your Family and Devices Now

Instead of Seeing a Naughty Website, You Simply See This...

This site is blocked due to content filtering.

Sorry, [blurred] has been blocked by your network administrator.

> [Report an incorrect block](#)

This site was blocked due to the following categories: **Pornography, Sexuality**

> [Diagnostic Info](#)

Just \$2 at PDF Reports

One price for all devices. I've done all the research for you. This solution works.
