

Ikea PRODUKT – How to Put the Batteries In

The Ikea PRODUKT frother takes 2 AA batteries, but not all battery brands will work. My Kirkland batteries were too wide. Ray O Vac batteries worked for me. The battery compartment is very compact.

1. With the door open and on the bottom, you'll put the the AA battery with the negative end (flat end away from you) first.
2. You might have to jiggle it to get it to fit and sit in place.
3. Put the second AA battery in the other way with the flat side toward you.

Here are some pictures to show you:

I saw a video on YouTube where some guy proceeds to explain that any AA batteries will work. At first, I thought that info was fluff and unnecessary, but now I know he's absolutely wrong. Not all brands work – that's the key. You wonder how 2 AA batteries will fit – I did. You need thinner ones.

I have no idea why Ikea did this poor of a design with the battery compartment in the Produkt frother. It seems to be a nice, cheap unit, but I see many people have trouble with getting the batteries in. I hope this helps you.
