

Make Sending Email Easy

What is My SMTP Server?

Having Trouble Sending

Email?

Getting email working can be frustrating. You want to make sure the email you send to your clients actually reaches them or your business can grind to a halt.

Your website host and others don't seem to be offering an outgoing server account anymore since it takes so much work for them to keep spammers out – but that doesn't concern you... you need to get email working and sent out.

Why is the SMTP Setting so Difficult?

The problem with the outgoing or sending email server is that many ISPs (Internet Service Providers) are locking them down and not allowing as much access as they used to. It takes a lot of work to maintain an SMTP server because spammers love to get a hold of them and send out TONS of spam. The only thing your ISP can do is limit the use of an SMTP server or shut it off completely.

This leaves you with having to find your own SMTP service if you want to ensure that your email is properly delivered.

What is the Solution?

You can get an account on an SMTP server that works with your email program no matter what network you're on. Get a remote SMTP service that you can rely on. You can make SMTP2Go your sending email server and you'll **never have to worry about sending**

email again. It'll always work. Nice, huh?

Solve your SMTP server problems now:

Best SMTP Service

Get SMTP Service for Sending Email

Really, the way to get the best SMTP service is to find a sending email provider that has great servers, is not on the spammer blacklists and is reliable. You set it once on your laptop and then forget it – it just keeps working from then on – no matter what network you join.

It's easy to set up and you get a way to login on their website and manage your account. It's very fast. I use it and there seem to be no delays at all – whatsoever. I'm very happy with it.

They help you set up your email program for their server. On the SMTP2Go website, you can find helpful screen shots that walk you through setting up your email program to use their SMTP server. It's easy for anyone to do. You don't need to be a computer geek. You can use your existing email software like Outlook, Outlook Express, Thunderbird, Apple Mail or Eudora.

They have accounts for personal or business use and they're affordably priced. There's even a 60 day, 100% money back guarantee, so you can't go wrong. It's not a free SMTP service, but with free you will get what you pay for. Why not go with an SMTP service that costs very little and is reliable?

Do You Travel and use a Laptop?

It can be a pain trying to send email on different networks that you join. Your email program might not know the settings needed to use the sending mail server (SMTP server) and it can seem impossible to send email. Don't get chained to your ISP outgoing server account anymore – get guaranteed, worldwide service and never worry about it again!

Why Would You Need to Change Your SMTP Server?

SMTP is the protocol for sending email over the Internet. It's your "sending server." When you send an email, it first is sent to your SMTP server. It then forwards your email to the recipient of your email. In order to send email you need an SMTP server that works.

More Benefits:

- You do not need to change your email account. It works with your existing email account that you use an email program like Outlook for.
- You can still send attachments like normal.
- It's easy to set up and use.
- This can be your worldwide SMTP server – works in any country online (global SMTP).
- You can even use it if your ISP or network blocks port 25 – the normal port used for SMTP / sending email. The ports offered are: 25, 2525, 8025 and 587

Plans start at about \$5 per month. To take care of SMTP sending headaches, that's SO worth it!

They have a free account you can start with where you can send 20 emails per day for free. There's no credit card needed. There's NO risk. Solve this problem now and go here:
